

Multi-Strategy Income Fund Historical Allocation

Active, flexible approach drives consistent outperformance since inception

The Angel Oak Multi-Strategy Income Fund is an actively managed fund that has a current bias toward credit and low duration assets. The strategy will shift over time as the managers' macro view on the economy, credit, interest rates and capital market conditions changes.¹ Since inception, the Fund (Class A at NAV) has outperformed its benchmark by allocating assets to a variety of structured credit asset classes and making strategic allocation shifts over time.

²The Bloomberg Barclays U.S. Aggregate Bond Index: An unmanaged index that measures the performance of the investment-grade universe of bonds issued in the United States. The index includes institutionally traded U.S. Treasury, government sponsored, mortgage and corporate securities.

It is not possible to invest directly in an index.

Must be preceded or accompanied by a prospectus. To obtain an electronic copy of the prospectus, please visit www.angeloakcapital.com.

Mutual fund investing involves risk; Principal loss is possible. Investments in debt securities typically decreases when interest rates rise. This risk is usually greater for longer-term debt securities. Investments in lower rated and non-rated securities present a greater risk of loss to principal and interest than higher rated securities. Investments in asset-backed and mortgage-backed securities include additional risks that investors should be aware of including credit risk, prepayment risk, possible illiquidity and default, as well as increased susceptibility to adverse economic developments. Derivatives involve risks different from, and in certain cases, greater than the risks presented by more traditional investments. Derivatives may involve certain costs and risks such as illiquidity, interest rate, market, credit, management and the risk that a position could not be closed when most advantageous. Investing in derivatives could lose more than the amount invested. The Fund may make short sales of securities, which involves the risk that losses may exceed the original amount invested.

For more information on these risks and other risks of the Fund, please see the Prospectus.

The value of some mortgage-backed securities may be particularly sensitive to changes in prevailing interest rates, and although the securities are generally supported by some form of government or private insurance, there is no assurance that private guarantors or insurers will meet their obligations. Diversification does not ensure a profit or guarantee against loss.

The Fund may invest in high yield securities or unrated securities of similar credit quality (commonly known as junk bonds), as well as derivatives of such securities, and therefore is likely to be subject to greater levels of interest rate, credit and liquidity risk than funds that do not invest in such securities. These securities are considered predominately speculative with respect to the issuers' continuing ability to make principal and interest payments. An economic downturn or period of rising interest rates could adversely affect the market for these securities and reduce the Fund's ability to sell these securities (liquidity risk). If the issuer of a security is in default with respect to interest or principal payments, the Fund may lose its entire investment.

There is no guarantee that this or any investment strategy will succeed, the strategy is not an indicator of future performance, and investment results may vary.
