

Returns in Periods of Rising Rates

While interest rates continue to test period lows, improving economic conditions and an impending end to quantitative easing make the prospects for rising rates even more of a reality. While rising rates could significantly impact much of the traditional fixed income market with the erosion of principal, the Angel Oak Multi-Strategy Income Fund is well-positioned to potentially outperform in a rising rate environment.

Why the Multi-Strategy Income Fund makes sense in today's environment:

- **Low duration:** Well positioned for rising rate environment with heavy exposure to floating rate securities.
- **High current income:** I Shares subsidized SEC yield of 4.72% as of 12/31/2017.
- **Low correlation:** Daily correlation of 0.1 to the Bloomberg Barclays U.S. Aggregate Bond Index (BBgBarc Agg.) since inception.
- **Historical performance:** Strong outperformance when rates have risen.

ANGIX has outperformed during periods of rising rates

Source: U.S. Treasury, Morningstar Direct. This chart illustrates the performance of a hypothetical \$10,000 investment made in Angel Oak Multi-Strategy Income Fund (ANGIX) I Shares since inception on 6/28/11 through 12/31/2017. It assumes reinvestment of capital gains and dividends. This chart is not intended to imply any future performance.

Past performance is no guarantee of future results. Please see reverse for full performance information.

Current performance may be lower or higher than the performance data quoted. Performance quoted is past performance and is no guarantee of future results. The investment return and principal value of an investment in the Fund will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Returns shown for A Shares at NAV do not reflect the maximum sales load of 2.25%; if reflected, performance would be lower than shown. Current performance to the most recent month end can be obtained by calling 855-751-4324.

¹Bloomberg Barclays U.S. Aggregate Bond Index. See below for definition.

²The inception date of the Angel Oak Multi-Strategy Income Fund A Class (ANGLX) was June 28, 2011, while the inception date of the Institutional Class (ANGIX) was August 16, 2012. The returns of ANGIX shown for periods prior to the inception date include the returns of ANGLX and are adjusted to reflect the operating expenses of ANGIX.

³Maximum Offering Price takes into account the 2.25% maximum initial sales charge.

⁴Gross expense ratios are reported as of the 5/31/17 prospectus. The net expense ratios are reported as of the 1/31/17 Annual Report and are referenced in the 5/31/17 prospectus. The Adviser has contractually agreed to waive fees through 5/31/18.

30-Day SEC Yield: The SEC yield is an annualized yield based on the most recent 30-day period. For the Angel Oak Multi-Strategy Income Fund, subsidized yields reflect fee waivers in effect. Without such waivers, yields would be reduced. Unsubsidized yields do not reflect fee waivers in effect. As of 12/31/2017, the subsidized and unsubsidized 30-Day SEC yield for ANGLX were 4.44% and 4.46%, respectively, and for ANGIX they were 4.72% and 4.76%, respectively. The unsubsidized SEC yield is higher than the subsidized SEC yield due to the Fund recouping previously waived expenses.

Bloomberg Barclays U.S. Aggregate Bond Index: An unmanaged index that measures the performance of the investment-grade universe of bonds issued in the United States. The index includes institutionally traded U.S. Treasury, government sponsored, mortgage and corporate securities.

Basis point (bps): A unit equal to one hundredth of a percentage point.

Correlation: A statistical measure of how two securities move in relation to another. Index used for comparison is the Bloomberg Barclays U.S. Aggregate Bond Index.

Effective Duration: Measures a portfolio's sensitivity to changes in interest rates. Generally, the longer the effective duration, the greater the price change relative to interest rate movements.

Sharpe Ratio: A statistical measure that uses standard deviation and excess return to determine reward per unit of risk. A higher Sharpe ratio implies a better historical risk-adjusted performance. The Sharpe ratio has been calculated since inception using the 3-month Treasury for the risk-free rate of return.

Standard Deviation: A statistical measure of portfolio risk used to measure variability of total return around an average, over a specified period of time. The greater the standard deviation over the period, the wider the variability or range of returns and hence, the greater the fund's volatility. The standard deviation has been calculated since inception.

It is not possible to invest directly in an index.

Mutual fund investing involves risk; Principal loss is possible. Investments in debt securities typically decreases when interest rates rise. This risk is usually greater for longer-term debt securities. Investments in lower rated and non-rated securities present a greater risk of loss to principal and interest than higher rated securities. Investments in asset-backed and mortgage-backed securities include additional risks that investors should be aware of including credit risk, prepayment risk, possible illiquidity and default, as well as increased susceptibility to adverse economic developments. Derivatives involve risks different from, and in certain cases, greater than the risks presented by more traditional investments. Derivatives may involve certain costs and risks such as illiquidity, interest rate, market, credit, management and the risk that a position could not be closed when most advantageous. Investing in derivatives could lose more than the amount invested. The Fund may make short sales of securities, which involves the risk that losses may exceed the original amount invested. For more information on these risks and other risks of the Fund, please see the Prospectus.

As of 12/31/17, the Angel Oak Multi-Strategy Income Fund (ANGLX) received a Morningstar rating based on risk-adjusted returns of 4 stars overall, 3 stars for the three-year period & 4 stars for the five-year period among 257, 257, and 202 multisector bond funds, respectively. The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history, without adjustment for sales loads. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar

About Angel Oak Capital Advisors:

Angel Oak Capital Advisors is an investment management firm focused on providing compelling fixed income investment solutions for its clients. Backed by a value-driven approach, Angel Oak Capital seeks to deliver attractive risk-adjusted returns through a combination of stable current income and price appreciation. Its experienced investment team seeks the best opportunities in fixed income with a specialization in mortgage-backed securities and other areas of structured credit. As of 12/31/17, Angel Oak Capital had approximately \$8 billion in assets under management through a combination of mutual funds, private funds and separately managed accounts.

Rating™ for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating™ metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.
