# **Angel Oak High Yield Opportunities Fund**

The strategy seeks to provide current income. Capital appreciation is a secondary objective. The goal of the Fund is to maximize long-term risk-adjusted returns relative to the market with an emphasis on minimizing downside risk. The Fund is diversified and invests principally in high-yield corporate bonds rated below investment grade. The Fund may purchase bonds of any maturity, but will normally have a dollar-weighted average maturity between two and fifteen years. The Fund is managed against the ICE BofA Merrill Lynch U.S. High Yield Index.

# **GROWTH OF \$10,000 SINCE INCEPTION (AS OF 12/31/2017)**

This chart illustrates the performance of a hypothetical \$10,000 investment made in Angel Oak High Yield Opportunities Fund (ANHIX) I Shares since inception on 3/31/09. It assumes reinvestment of capital gains and dividends. This chart is not intended to imply any future performance.

# Annualized

Total Returns (as of 12/31/17)	<b>4Q17</b>	YTD	1 Year	3 Years	5 Years	Inception1
Class I	1.40%	7.78%	7.78%	7.40%	6.03%	9.88%

<sup>1</sup>The inception date of the Angel Oak High Yield Opportunities Fund I Class (ANHIX) was March 31, 2009, while the inception date of the A Class (ANHAX) was 7/31/12. The returns of ANHAX shown for periods prior to the inception date include the returns of ANHIX and are adjusted to reflect any applicable sales charges and the higher annual operating expenses of Class A. <sup>2</sup>Maximum Offering Price takes into account the 2.25% maximum initial sales charge. <sup>3</sup>ICE BofAML U.S. High Yield Index. <sup>4</sup>Correlation to Index is monthly as of 12/31/2017. See reverse for definition.

Current performance may be lower or higher than the performance data quoted. Performance quoted is past performance and is no guarantee of future results. The investment return and principal value of an investment in the Fund will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Returns shown for A Shares at NAV do not reflect the maximum sales load of 2.25%; if reflected, performance would be lower than shown. Current performance to the most recent month end can be obtained by calling 855-751-4324.

30-Day SEC Yield: The SEC yield is an annualized yield based on the most recent 30-day period. Subsidized yields reflect fee waivers in effect. Without such waivers, yields would be reduced. Unsubsidized yields do not reflect waivers in effect. Average Coupon: Equal to the total interest payments of an issue divided by bond year dollars.

ICE Bank of America Merrill Lynch U.S. High Yield Index: Tracks the performance of U.S. dollar denominated below investment grade corporate debt publicly issued in the U.S. domestic market, and includes securities rated below BBB and not in default, with at least 18 months to maturity, a fixed coupon, and at least \$250 million outstanding. Correlation: A statistical measure of how two securities move in relation to another. Index used for comparison is the ICE BofAML U.S. High Yield Index. Distribution Yield: The distribution yield is calculated by annualizing actual dividends distributed for the monthly period ended on the date shown and dividing by the net asset value on the last business day for the same period. The yield does not include long-or short-term capital gains distributions.

Sharpe Ratio: A statistical measure that uses standard

Sharpe Ratio: A statistical measure that uses standard deviation and excess return to determine reward per unit of risk. A higher Sharpe ratio implies a better historical risk-adjusted performance. The Sharpe ratio has been calculated since inception using the 3-month Treasury bill for the risk-free rate of return.

Standard Deviation: A statistical measure of portfolio

Standard Deviation: A statistical measure of portfolio risk used to measure variability of total return around an average, over a specified period of time. The greater the standard deviation over the period, the wider the variability or range of returns and hence, the greater the fund's volatility—calculated since incention.

Yield to Worst (YTW): The lowest potential yield that can be received on a bond without the issuer actually defaulting.

It is not possible to invest directly in an index.

reorganization of the Predecessor High Yield Fund into the Fund on April 15, 2016. Accordingly, the performance information shown below for periods prior to April 15, 2016 is that of the Predecessor High Yield Fund's Institutional Shares and Original Shares for the Fund's Institutional Class and Class A shares, respectively. The Predecessor High Yield Fund was managed by the same portfolio managers as the Fund and had substantially the same investment objectives, policies, and strategies as the Fund. Effective April 15, 2016, a sales charge (load) applies to purchases of Class A shares (subject to the exceptions described in the Prospectus), and performance of the Class A shares shown prior to April 15, 2016 has been adjusted to reflect the applicable sales charges.

Mutual fund investing involves risk. Principal loss is possible. Investments in debt securities typically decreases when interest rates rise. This risk is usually greater for longer-term debt securities. Investments in lower rated and non-rated securities present a greater risk of loss to principal and interest than higher rated securities. Investments in asset-backed and mortgage-backed securities include additional risks that investors should be aware of including credit risk, prepayment risk, possible illiquidity and default, as well as increased susceptibility to adverse economic developments. Derivatives involve risks different from, and in certain cases, greater than the risks presented by more traditional investments. Derivatives may involve certain costs and risks such as illiquidity, interest rate, market, credit, management and the risk that a position could not be closed when most advantageous. Investing in derivatives could lose more than the amount invested. Investments in foreign securities involve greater volatility and political, economic and currency risks and differences in accounting methods. For more information on these risks and other risks of the Fund, please see the Prospectus.

As of 12/31/17, the Angel Oak High Yield Opportunities Fund (ANHIX) received a Morningstar rating based on risk-adjusted returns of 4 stars overall, 5 stars for the three-year period and 4 stars for the five-year period among 609, 609, and 501 high yield bond funds. The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history, without adjustment for sales loads. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent

performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating™ for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating™ metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.
