30-Day SEC Yield: The SEC yield is an annualized yield based on the most recent 30-day period. For the Angel Oak Multi-Strategy Income Fund, subsidized yields reflect fee waivers in effect. Without such waivers, yields would be reduced. Unsubsidized yields do not reflect fee waivers in effect. As of 6/30/18, the subsidized and unsubsidized 30-Day SEC yield for ANGLX were 4.36% and 4.38%, respectively, and for ANGIX they were 4.72% and 4.74%, respectively. The unsubsidized SEC yield is higher than the subsidized SEC yield due to the Fund recouping previously waived expenses.

Bloomberg Barclays U.S. Aggregate Bond Index: An unmanaged index that measures the performance of the investment-grade universe of bonds issued in the United States. The index includes institutionally traded U.S. Treasury, government sponsored, mortgage and corporate securities.

Correlation: A statistical measure of how two securities move in relation to another. Index used for comparison is the Bloomberg Barclays U.S. Aggregate Bond Index.

Duration: Measures a portfolio's sensitivity to changes in interest rates. Generally, the longer the effective duration, the greater the price change relative to interest rate movements.

Sharpe Ratio: A statistical measure that uses standard deviation and excess return to determine reward per unit of risk. A higher Sharpe ratio implies a better historical risk-adjusted performance. The Sharpe ratio has been calculated since inception using the 3-month Treasury bill for the risk-free rate of return.

It is not possible to invest directly in an index.

Mutual fund investing involves risk; Principal loss is possible. Investments in debt securities typically decreases when interest rates rise. This risk is usually greater for longer-term debt securities. Investments in lower rated and non-rated securities present a greater risk of loss to principal and interest than higher rated securities. Investments in asset-backed and mortgage-backed securities include additional risks that investors should be aware of including credit risk, prepayment risk, possible illiquidity and default, as well as increased susceptibility to adverse economic developments. Derivatives involve risks different from, and in certain cases, greater than the risks presented by more traditional investments. Derivatives may involve certain costs and risks such as illiquidity, interest rate, market, credit, management and the risk that a position could not be closed when most advantageous. Investing in derivatives could lose more than the amount invested. The Fund may make short sales of securities, which involves the risk that losses may exceed the original amount invested. For more information on these risks and other risks of the Fund, please see the Prospectus.
