

Angel Oak UltraShort Income Fund

The Fund will invest across a diversified basket of U.S. fixed income. The primary focus of Fund assets will be within the best relative value opportunities of structured credit, including RMBS, CMBS, ABS, and CLOs. The Fund may also include allocations to government bonds and agency-backed securities, which include U.S. Treasury securities, agency RMBS, and agency CMBS. We believe this combination of structured credit, U.S. Treasuries, and agency-backed bonds will provide balance to the Fund and enhance price stability. This top-down approach to asset allocation will seek to provide the Fund with superior income within the Ultrashort landscape, with a predominant focus on minimizing volatility.

The Fund's average rate duration will be maintained below 1.0, while the average effective maturity will be maintained below 2.0 years.

INVESTMENT FOCUS

At least 80% of the Fund's net assets will be invested in the following fixed income sectors:

- Agency and non-agency residential mortgage-backed securities (RMBS)
- Agency and non-agency commercial mortgage-backed securities (CMBS)
- Asset-backed securities (ABS)
- Collateralized loan obligations (CLO)
- U.S. Treasuries and agency debentures
- Corporate credit

YIELD AND DURATION

| Relative Sector Weights | Fund | Morningstar Category | Benchmark |
|------------------------------|--------|----------------------|-----------|
| RMBS | 15.2% | 4.9% | 0.0% |
| CMBS | 16.4% | 2.1% | 0.0% |
| ABS | 54.4% | 13.9% | 0.0% |
| Corporate | 1.0% | 32.7% | 0.0% |
| CLO | 13.0% | 0.0% | 0.0% |
| Agency/Government | 0.0% | 18.0% | 100.0% |
| Cash, Equivalents, and Other | 0.0% | 28.4% | 0.0% |
| Total | 100.0% | 100.0% | 100.0% |

Performance data quoted represents past performance. Past performance is no guarantee of future results. The investment return and principal value of an investment in the Fund will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than what is stated and may be obtained by calling 855-751-4324. Short-term performance, in particular, is not a good indication of the Fund's future performance and an investment should not be made based solely on returns.

*The Adviser has contractually agreed to waive its fees to limit the Total Annual Fund Operating Expenses After Fee Waiver/Expense Reimbursement to 0.49% of the Fund's average daily net assets through 5/31/19. In addition, the Adviser has voluntarily agreed to limit these expenses to 0.25% through 11/4/18; this expense limit is applicable to current investors. ¹30-Day SEC Yield. ²Morningstar Ultrashort Bond Category. ³Bloomberg Barclays 9-12 Month U.S. Treasury Bill Index. ⁴The inception date of the Angel Oak UltraShort Income Fund I Class (AOUIX) was 4/2/18, while the inception date of the A Class (AOUAX) was 4/30/18. The returns of AOUAX shown for periods prior to the inception date include the returns of AOUIX and are adjusted to reflect any applicable sales charges and the higher annual operating expenses of Class A.

CREDIT QUALITY*

*Unrated consists of corporate bonds that do not have ratings; total may not equal 100% due to rounding. Ratings determined by S&P and Moody's.

30-Day SEC Yield: The SEC yield is an annualized yield based on the most recent 30-day period. Subsidized yields reflect fee waivers in effect. Without such waivers, yields would be reduced. Unsubsidized yields do not reflect fee waivers in effect.

Correlation: A statistical measure of how two securities move in relation to another. Index used for comparison is the Bloomberg Barclays 9-12 Month U.S. Treasury Bill Index.

Bloomberg Barclays 9-12 Month U.S. Treasury Bill Index: Measures the performance of U.S. Treasury bills, notes, and bonds with a remaining maturity between 9-12 months. The index does not include trading and management costs.

Effective Duration: Measures a portfolio's sensitivity to changes in interest rates. Generally, the longer the effective duration, the greater the price change relative to interest rate movements.

Sharpe Ratio: A statistical measure that uses standard deviation and excess return to determine reward per unit of risk. A higher Sharpe ratio implies a better historical risk-adjusted performance. The Sharpe ratio has been calculated since inception using the 3-month Treasury bill for the risk-free rate of return.

Standard Deviation: A statistical measure of portfolio risk used to measure variability of total return around an average, over a specified period of time. The greater the standard deviation over the period, the wider the variability or range of returns and hence, the greater the fund's volatility—calculated since inception.

It is not possible to invest directly in an index.

Investing involves risk. Principal loss is possible. The Fund's derivative investments have risks, including the imperfect correlation between the value of such instruments and the underlying asset, rate or index, which creates the possibility that the loss on such instruments may be greater than the gain in the value of the underlying asset, rate or index; the loss of principal; the possible default of the other party to the transaction; and illiquidity of the derivative investments. The Fund may invest in illiquid securities and restricted securities. Investments in restricted securities could have the effect of increasing the amount of the Fund's assets invested in illiquid securities if qualified institutional buyers are unwilling to purchase these securities. Changes in interest rates generally will cause the value of fixed-income instruments held by the Fund to vary inversely to such changes. Below investment grade instruments are commonly referred to as "junk" or high-yield instruments and are regarded as predominantly speculative with respect to the issuer's capacity to pay interest and repay principal. Lower grade instruments may be particularly susceptible to economic downturns. The price paid by the Fund for asset-backed securities, including CLOs, the yield the Fund expects to receive from such securities and the average life of such securities are based on a number of factors, including the anticipated rate of prepayment of the underlying assets. Mortgage-backed securities are subject to the general risks associated with investing in real estate securities; that is, they may lose value if the value of the underlying real estate to which a pool of mortgages relates declines. See the prospectus for a more detailed description of Fund risks.

Diversification does not guarantee a profit or protect against a loss in declining markets.

Bond ratings are grades given to the bonds to indicate their credit quality as determined by S&P and Moody's. The firm evaluates a bond issuer's financial strength, or its ability to pay a bond's principal and interest in a timely fashion. Ratings are expressed as letters, ranging from AAA, which is the highest grade, to D, which is the lowest grade. In limited situations, when a rating agency has not issued a formal rating, the adviser will classify the security as non-rated.

The Morningstar Ultrashort Bond Category average represents an average of all of the funds in the Morningstar Ultrashort Bond Category.
