

Angel Oak Financials Income Fund

The Fund seeks to generate current income across various market environments with a secondary focus on generating positive total return. The Fund has a long-term focus on the financial sector and will invest primarily in banks, including senior and subordinated debt, TruPS and equities, as well as debt of other financial services companies, including finance companies, brokerage and advisory firms, insurance companies, BDCs and REITs. The Fund currently offers investors an attractive yield for investment-grade risk with low correlation to the broader fixed-income market.

GROWTH OF \$10,000 SINCE INCEPTION (AS OF 3/31/19)

This chart illustrates the performance of a hypothetical \$10,000 investment made in Angel Oak Financials Income Fund (ANFIX) I Shares since inception on 11/3/14. It assumes reinvestment of capital gains and dividends. This chart is not intended to imply any future performance.

¹The inception date of both the Angel Oak Financials Income Fund A and I Class (ANFLX and ANFIX) was 11/3/14. ²Maximum Offering Price takes into account the 2.25% maximum initial sales charge. ³Bloomberg Barclays U.S. Aggregate Bond Index. ⁴Correlation to Index is daily as of 3/31/19. See reverse for definition.

Current performance may be lower or higher than the performance data quoted. Performance quoted is past performance and is no guarantee of future results. The investment return and principal value of an investment in the Fund will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Returns shown for A Shares at NAV do not reflect the maximum sales load of 2.25%; if reflected, performance would be lower than shown. Current performance to the most recent month end can be obtained by calling 855-751-4324.

*Gross expense ratios are reported as of the 5/31/18 prospectus. The net expense ratios are reported as of the 1/31/18 Annual Report and are referenced in the 5/31/18 prospectus. The Adviser has contractually agreed to waive fees through 5/31/20.

SECTOR BREAKDOWN

Fund holdings and sector allocations are subject to change and are not recommendations to buy or sell any security. Totals may not equal 100% due to rounding.

BDC: Business Development Company.

30-Day SEC Yield: The SEC yield is an annualized yield based on the most recent 30-day period. Subsidized yields reflect fee waivers in effect. Without such waivers, yields would be reduced. Unsubsidized yields do not reflect fee waivers in effect.

Bloomberg Barclays U.S. Aggregate Bond Index: An unmanaged index that measures the performance of the investment-grade universe of bonds issued in the United States. The index includes institutionally traded U.S. Treasury, government sponsored, mortgage and corporate securities.

Correlation: A statistical measure of how two securities move in relation to another. Index used for comparison is the Bloomberg Barclays U.S. Aggregate Bond Index.

Distribution Yield: The distribution yield is calculated by annualizing actual dividends distributed for the monthly period ended on the date shown and dividing by the net asset value on the last business day for the same period. The yield does not include long- or short-term capital gains distributions.

Effective Duration: Measures a portfolio's sensitivity to changes in interest rates. Generally, the longer the effective duration, the greater the price change relative to interest rate movements.

Sharpe Ratio: A statistical measure that uses standard deviation and excess return to determine reward per unit of risk. A higher Sharpe ratio implies a better historical risk-adjusted performance. The Sharpe ratio has been calculated since inception using the 3-month Treasury bill for the risk-free rate of return.

Standard Deviation: A statistical measure of portfolio risk used to measure variability of total return around an average, over a specified period of time. The greater the standard deviation over the period, the wider the variability or range of returns and hence, the greater the fund's volatility—calculated since inception.

Effective 12/16/18, the Angel Oak Flexible Income Fund changed its name to the Angel Oak Financials Income Fund.

It is not possible to invest directly in an index.

As of 3/31/19, the Angel Oak Financials Income Fund (ANFIX) received a Morningstar rating based on risk-adjusted returns of 5 stars overall & 5 stars for the three-year period among 180 and 180 corporate bond funds, respectively. The Morningstar Rating™ for funds, or “star rating”, is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating™ for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating™ metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.

Past performance is no guarantee of future results.

Mutual fund investing involves risk; Principal loss is possible. Investments in debt securities typically decreases when interest rates rise. This risk is usually greater for longer-term debt securities. Investments in lower rated and non-rated securities present a greater risk of loss to principal and interest than higher rated securities. Investments in asset-backed and mortgage-backed securities include additional risks that investors should be aware of including credit risk, prepayment risk, possible illiquidity and default, as well as increased susceptibility to adverse economic developments. Derivatives involve risks different from, and in certain cases, greater than the risks presented by more traditional investments. Derivatives may involve certain costs and risks such as illiquidity, interest rate, market, credit, management and the risk that a position could not be closed when most advantageous. Investing in derivatives could lose more than the amount invested. The Fund may make short sales of securities, which involves the risk that losses may exceed the original amount invested. For more information on these risks and other risks of the Fund, please see the Prospectus.
