

Multi-Strategy Income Fund Historical Allocation

Active, flexible approach drives consistent outperformance since inception

The strategy is an actively managed fund that has a current bias toward credit and low duration assets. The strategy will shift over time as the managers' macro view on the economy, credit, interest rates and capital market conditions changes¹. Since inception, the Fund (Class A at NAV) has outperformed its benchmark by allocating assets to a variety of structured credit asset classes and making strategic allocation shifts over time.

Mutual fund investing involves risk; principal loss is possible. Investments in debt securities typically decrease when interest rates rise. This risk is usually greater for longer-term debt securities. Investments in lower-rated and nonrated securities present a greater risk of loss to principal and interest than higher-rated securities do. Investments in asset-backed and mortgage-backed securities include additional risks that investors should be aware of, including credit risk, prepayment risk, possible illiquidity, and default, as well as increased susceptibility to adverse economic developments. Derivatives involve risks different from—and in certain cases, greater than—the risks presented by more traditional investments. Derivatives may involve certain costs and risks such as illiquidity, interest rate, market, credit, management, and the risk that a position could not be closed when most advantageous. Investing in derivatives could lead to losses that are greater than the amount invested. The Fund may make short sales of securities, which involves the risk that losses may exceed the original amount invested. The Fund may use leverage, which may exaggerate the effect of any increase or decrease in the value of securities in the Fund's portfolio or higher and duplicative expenses when it invests in mutual funds, ETFs, and other investment companies. For more information on these risks and other risks of the Fund, please see the Prospectus.
